

FNE 464 FOOD PRESERVATION

39 Hr (13× 3 units)

Course outcome:

At the end of this course the students will be able to-

- CO 1. Describe different processing and food preservation techniques based on different food materials
- CO 2. Understand the food processing techniques, various methods used to preserve foods and factors influencing the shelf-life of the food products.
- CO 3. Know the different packaging techniques used for food packaging.
- CO 4. Describe the effects of different processing techniques on palatability and nutritive value of food.

Unit I: Principles of food preservation, methods of food preservation, Asepsis, removal of micro-organisms, maintenance of aseptic condition, classification of food for processing, chemicals in food preservation, food irradiation, concept of hurdle technology, Microwave heating.

Unit II: Preservation of food by high temperature-Pasteurization, sterilization, Canning. Preservation by low temperature-refrigeration, freezing, freeze drying, freezer burn

Unit III: Food dehydration and concentration: methods of drying and concentration, Osmotic dehydration, equipment for drying/dehydration, factors affecting drying process.
