MANGALORE UNIVERSITY
APPLIED ZOOLOGY
PH.D.COURSE WORK

Scheme of Course Work

Papers	Particulars	Hours of Instruction per week	Duration of Examination (hrs)	Marks			Credits
				IA	Theory	Total	
Paper 1	Research Methodology	4	3	30	70	100	4
Paper 2	Theoretical Foundations	4	3	30	70	100	4
Paper 3	Recent Developments	4	3	30	70	100	4
Paper 4	Reviewing of Literature and Planning of the Proposed Research Work with a Tentative Title	4	-	-	-	200	8
		Total 16					20 Credits

IA = Internal assessment

Note: Internal assessment will be based on , 1 theory test, 1 Objective test and Seminar/ assignment in each paper.

Pattern of question paper for theory examination of 70 marks:

**Q.no.I - 10 questions of 2 marks each 10X2 = 20
(Two questions need to be chosen from each unit)**

Q. no. II to VI - 10 marks each 5X10 = 50

TOTAL : 70

2 questions need to be given from each unit and candidate shall answer one question out of them. The choice shall be within the unit only.

Dr. K.K. Vijayalaxmi
Chairperson

Board of Studies in Applied Zoology

Board of Studies in Applied Zoology Members

**APPLIED ZOOLOGY
PH.D. COURSE WORK**

PAPER I :RESEARCH METHODOLOGY

12 hours/unit

Total : 60 hrs.

Unit I - *Research Planning and Execution*

Defining of research problem, objectives and its importance.
Sources of information; Journals, books, Biological abstracts, Reviews.
Data bases, search engines, INFLIBNET, Pubmed, Science Direct, e journals,
Bibliography.
Background, preliminary observations; Data collection, Recording the data, Methods of analysis, presentation of the data.
Methods of writing the findings; components of thesis, Structure of a research article,
Presentation of research findings

Unit II - *Biostatistics and Computer applications*

Statistical variables, Frequency distribution, Graphical representation of the data.
Probability, ANOVA , Student *t* test; Chi square test, Correlation and regression analysis;
Nonparametric tests – Wilcoxon signed rank test, Mann-Whitney U Test, Kruskal Wallis test.
Computer software statistical packages, MS EXCEL, SPSS, MINITAB Packages and their uses.
Dun net's post-hoc test.

Unit III - *Cell and Molecular Biologytechniques*

In vitro animal cell culture systems, Primary and secondary cultures, requirements, methodology and applications of each culture systems.
Principle, methods and applications of Cryopreservation, Histological and Histochemical techniques, flow cytometry
Principle, methods and applications of light and confocal microscopy, Electron microscopy.

Image analysis, Gel doc system – Methods and applications.
Principle, methods and applications of Polymerase chain reaction, DNA sequencing, Blot techniques
Autoradiography, DNA fingerprinting, FISH, RFLP– Principle, methods and applications

Unit IV -*Biochemical and physiology techniques*

Principle, methods and applications of various types of Chromatography; HPLC, GLC, LCMS
Dialysis and precipitation technique; Ultracentrifugation Electrophoresis,
Electrofocussing, organelle separation- Principle, methods and applications.

Principle, methods and applications of Spectrophotometry, Tracer techniques, ELISA, RIA, Immunodiffusion and immunoprecipitation.

Electrodes, preamplifiers, DC and AC, Faraday cage oscilloscopy, Analog-digital conversion, Anatomical studies: use of antibodies, GFP Gal 4 lines

Unit V - *Breeding and maintenance of laboratory animals*

Introduction to experimental animals- mouse, rats, guinea pigs, hamsters, rabbits.

Breeding and maintenance of small laboratory animals – mouse and rat
CPCSEA Guidelines and IAEC – Rules and regulations for animal breeding and maintenance.

Handling, treatment and collection of biological materials from experimental animals, Good laboratory practices

Waste disposal

APPLIED ZOOLOGY
PH.D. COURSE WORK
PAPER II- THEORETICAL FOUNDATION

12 hrs/unit

Total - 60 hours

Unit I Cell and Molecular Biology and Cancer Biology

Organisation of prokaryotic and eukaryotic cells. Animal viruses, bacterial viruses, plant viruses.

Structural organization of nucleus, structure of eukaryotic chromosomes. Molecular organization of chromatin, Nucleosomes. Structure of gene, genetic code and gene regulation.

DNA structure, mutations, DNA repair.

Type of cancer, causes of cancer, cancer inducing agents. Occupational cancers, Role of tobacco as carcinogenic agent.

Chromosomal changes in cancer. Oncogenes and tumor suppressor genes; their role in carcinogenesis. Cellular ageing, apoptosis.

Unit II Genetics and Cytogenetics :

Cell cycle, Mitosis, Meiosis - Gametogenesis. Physical basis of heredity. Perspective of Human Genetics- Human chromosomes and construction of karyotype. Chromosome non-disjunction. Chromosomal aberrations- Structural and numerical chromosome variations; chromosomal races. Autosomal and sex linked chromosomal inheritance, Multifactorial inheritance, Pedigree analysis . Genetic counseling. Amniocentesis, chorionic villus sampling. IVF in humans.

Unit III Physiology and Neurobiology

Concept of homeostasis. Variables-External factors and internal milieu. Mechanisms of homeostasis, range and control systems. Transport of ions and molecules through the cell Membrane. Intracellular communication and pathways. Contraction and excitation of skeletal muscles, neuromuscular transmission and coupling. Electrocardiogram and dynamics of circulation. Structure of nervous system. Electrical activity of neurons. Regulation of blood volume, extracellular fluid volume and acid- base balance. Digestion and absorption in the GI tract.

Unit IV Biodiversity

Biodiversity and its importance –Values of biodiversity. Uniqueness of Indian wildlife. Types of Ecosystem- Aquatic, terrestrial and Nature of ecosystem . Species interactions , Keystone species . Energy flow in ecosystem, Loss of biodiversity- Natural and Anthropogenic factors . Principles and methods of Conservation – In situ and Ex- situ conservation .Biodiversity indices .

Unit :V Entomology and Fishery Biology MK.

Entomology -Classification of insects, General morphology of insects- Pests of major field and horticultural crops. Storage pests, Vectors of human diseases, beneficial insects.

Fishery Biology - Introduction, Classification of fishes with special reference to evolutionary trends and adaptations. Distribution of freshwater and marine fishes of India. Food and feeding habits of fishes (general account);Reproduction- Reproductive diversity, Reproductive cycles, Reproduction and spawning; fish eggs and larvae, Reproductive behavior and parental care.

Changed version

APPLIED ZOOLOGY
Ph.D. Course Work

Paper III : Recent Developments

Genetic toxicology and Carcinogenesis

12 Hrs. /Unit

Total hours: 60

Unit I - Basic concepts of mutagenesis and genetic toxicology.

Introduction and historical perspective, Genotoxic exposures and DNA alternations – A classification scheme for genotoxic effects, microlesions and macrolesions, chromosomal aberration and gene mutations. Significance of genotoxic effects.

Risk estimation- definition of risk estimation, risk estimation in somatic and germ cells, dosimetry issues in risk assessment, data extrapolation issues in risk analysis.

Relationship of genotoxic effects to other toxicological phenomenon – oncogenesis, teratogenesis, sterility, aging etc.

Unit II – Basic concepts of cancer biology and carcinogenesis

What is cancer? Definition and description of cancer, How cancer arises? Basic facts about cancer, Hallmarks of malignant diseases.

Classification of human cancers, benign, malignant and metastatic tumors. Characteristics of malignant cells, grade and stage of neoplasms. Steps involved in carcinogenesis process, initiation, promotion and progression.

Tumor immunology - mechanisms of the immune response to cancer, tumor antigens.

Alterations seen in transformed cells in culture, cancer cell lines, maintenance of cancer cell lines in the laboratory. Cytogenetic changes in cancer, telomere and telomerase activity.

Unit III – Genotoxicity and carcinogenicity in humans and other mammals

Effect of mutagens on somatic and germinal cells of human and other mammals. Mutagenic and clastogenic effects of radiation and chemicals in humans and experimental animals. Occupation related mutagens.

Cancer inducing agents - Physical, chemical and biological agents, types of chemical carcinogens and mechanism of their actions. Irradiation carcinogenesis- Ionizing radiation, ultraviolet radiation, and mechanism of their action. Viral carcinogenesis - Role of viruses in the causation of human cancers.

Environmental causes of cancer, occupation related cancers, Role of tobacco in cancer induction, Carcinogens in the food.

Role of oncogenes and tumor suppressor genes in cancer induction, mechanism of their activation.

Unit IV - Genotoxicity testing methods and evaluation

Cytogenetic tests in mammals- treatment protocol, preparation of bone marrow chromosomes in mouse and aberration analysis. Bone marrow micronucleus tests and

tranplacental micronucleus tests. Cytogenetic & Genetic assays with germinal cells, meiotic chromosome aberration, sperm shape abnormality assay, dominant lethal test.

Assays for the detection of chromosome aberrations and micronuclei in cultured mammalian cells, MN test in binucleate cells, *In vivo* and *in vitro* comet assays.

Mutagenicity assays in bacterial cells- Ame's test,

Strategies for building a test battery, specific approaches, conducting the tests- general criteria for dose selection, *in vivo* and *in vitro* testing, data analysis and interpretation, interpretation of results from test batteries.

Unit V - Antimutagenesis and anticarcinogenesis

Definition of antimutagens and anticlastogens. Test systems for antimutagenicity and anticlastogenicity studies. Mammalian *in vivo* and *in vitro* test systems. Protocol for the anticlastogenicity testing in mice and cultured lymphocytes. Antimutagenicity/ anticlastogenicity/ anticarcinogenicity of plant extracts, seaweeds, vitamins and other natural compounds.

Mechanism of inhibitors of mutagenesis and carcinogenesis - classification and overview. Chemoprevention, radiomodifiers and radiosensitisers. *In vivo* survival assays, MST, ILS, trypan blue dye exclusion test, IC 50, MTT assay, apoptotic assays for anticarcinogenicity studies.

Formation of Oxygen-free radicals in toxic exposures and cancers, Role of antioxidants in antimutagenesis and anticarcinogenesis - SOD, catalase, GSH, GST, glutathione peroxidase, lipid peroxidation.

APPLIED ZOOLOGY
Ph.D. Course Work

Paper III : Recent Developments

Neurobiology

12 hrs/unit

Total - 60 hours

Unit I. Development of the nervous system

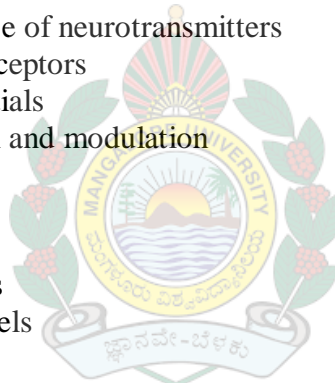

- Neuronal induction
- Cellular determination
- Neurogenesis and migration
- Growth cones, Axon pathfinding, Synapse elimination

Unit II. Neurotransmitters

- Synthesis and release of neurotransmitters
- Neurotransmitter receptors
- Post synaptic potentials
- Synaptic integration and modulation

Unit III. Ion channels

- Ion channel families
- Gating of ion channels
- Ion permeation
- Venoms and drugs acting on ion channels.

Unit IV. Neuronal plasticity

- Molecular aspects of plasticity
- Genetic approaches to learning and memory
- Long term potentiation
- Disorders of learning memory

Unit V. Sociobiology

- Social organization
- Costs and benefits of social life
- Inclusive fitness
- Evolution of eusocial behaviour

APPLIED ZOOLOGY
Ph.D. Course Work
Paper III : Recent Developments
PHYSIOLOGY

12 hrs/unit

Total - 60 hours

Unit I The matrix and energetics of life

Diffusion, surface tension and viscosity- their characteristics, factors influencing and biological application. Osmosis: osmotic pressure- laws. Role of water in biological processes, structure and properties of water, Protolysis of water. pH, acid-base neutralization curves, Buffer action: Henderson- Hasselbalch equation. Regulation of pH by blood buffers. Molecules with multiple ionizing groups. Thermodynamics: Type of surroundings and systems. First Law- Internal energy, enthalpy. Second law-Entropy, Free energy change, High energy phosphate compounds as energy shuttles, Endergonic and Exergonic reactions, Reversible and Irreversible processes, Equilibrium constant. Physiological steady-state, Living body as a thermodynamic system..

Unit II Enzymes - Biological Catalysts

Role of enzymes, Chemical reaction rates and the effects of catalysts, Classification-EC nomenclature, Enzymes as catalysts, Kinetics of enzymatic catalysts, Enzyme inhibition, Concept of apoenzyme, holoenzyme, coenzyme, cofactors and prosthetic groups. Diversity of enzymatic function, Non-protein biocatalyst-ribozymes, Rate-limiting enzymes, Isozymes, Ribozymes and Abzymes. Regulation of enzyme activity. Covalent modifications used to regulate enzyme activity. Molecular engineering of new and modified enzymes.

Unit III Gastrointestinal Physiology

Anatomy and Histology of alimentary canal. Principles of gastrointestinal function, Transport and mixing of food, Secretory functions, Digestion and absorption in the GI tract, Gastrointestinal disorders-peptic ulcer, constipation, diarrhea, vomiting, nausea, Gastrointestinal obstruction, Gases in the GI tract and flatus.

Unit IV . Neurophysiology

Structure, classification and functions of neurons and neuroglia, Cytoskeletal elements and axoplasmic flow, Myelinogenesis, Resting membrane potential, the action potential, electrotonic potentials, current of injury, Propagation of nerve impulse in different types of nerve fibres, Compound action potential, Properties of nerve fibres, Chronaxie, rheobase and utilization time, synapses-types, structure, synaptic transmission of nerve impulse, synaptic potentials, neurotransmitters, cotransmitters and neuromodulators, Neuromuscular junction, structure, transmission, end-plate potential, MEPP, post tunic potentiation, Motor unit and motor point, Injury to peripheral nerves-degeneration and regeneration in nerve fibre, changes in nerve cell body, Thermal changes of nerve during activity and nerve growth factors.

Unit V Muscle Physiology

Microscopic anatomy of a muscle fibre and motor unit., Skeletal muscle contraction at the molecular level, Histochemistry to determine the properties of muscle fibers. The muscle twitch, Stimulus strength and muscle contraction. Stimulus frequency and muscle contractions. Factors affecting force, velocity and duration of muscle contraction.

Electromyogram. Types of muscle contraction, Physiological contracture and muscle rigor mortis. Energy sources of muscle contraction

PH.D. COURSE WORK

PAPER III : RECENT DEVELOPMENTS
BIODIVERSITY

12 hours / Unit

Total – 60 Hrs.

UNIT I - BIODIVERSITY ASSESSEMENT:

Biodiversity; Distribution of biodiversity in India and at Global level. genetic diversity, molecular diversity and taxonomy, , DNA bar-coding, Modern tools of Taxonomy (alpha, beta and gamma level taxonomy), Application of molecular and computational tools for phylogeny - Quantitative methods: Biostatistics used for analysis of data ; Computer databases and their applications.

UNIT –II INVENTORYING AND MONITORING BIODIVERSITY :

Field studies: Assessment of biodiversity in different types of ecosystems, sampling techniques and quantitative methods for biodiversity assessment. Demographic analysis,. Techniques for capturing Wild animals . Tools and techniques in data collection and management. Taxon data sheet. GIS and GPS system. Resource base - Reference collection- Zoo, Botanical Garden , Aquaria etc. Gene bank, Sequence data bank.

UNIT III - THREATS AND STATUS OF BIODIVERSITY :

Mass extinction and global climatic change. Species extinction. Effects of man made alteration on biosphere . Biodiversity Hot spots. Intra and Inter specific Competition, Diseases of Wild animals. Climate change- Greenhouse effect. Global warming. bioaccumulation and Biomagnifications. IUCN red list criteria and categories.

UNIT IV - BIODIVERSITY CONSERVATION :

Identification of priority areas in biodiversity conservation. Managing ecosystem- Establishment of wildlife corridor. Management of wildlife population- .Habitat management and conservations. In-situ conservation: establishment of protected areas- National parks & Sanctuaries. Ex-situ conservation: Captive breeding and repopulation program.

UNIT V – BIODIVERSITY LEGISLATION AND SPECIAL PROJECTS

Legal aspects- National and International conventions- CITES, TRAFFIC; Earth summits, Ramsar conventions, Wildlife laws- Wildlife (protection) Act-1972; Indian biodiversity laws; Biodiversity acts, Forest laws of India, Fisheries act, Special projects- Project Tiger, Gir Lion project, Project Elephant, Crocodile breeding project.

APPLIED ZOOLOGY
PH.D. COURSE WORK

PAPER III : RECENT DEVELOPMENTS

CYTOGENETICS

12 hours / Unit

Total – 60 Hrs.

UNIT I : Chromosomes in evolutionary process

Chromosomes in karyotype changes & species differentiation, chromosomal mechanics in speciation processes (Rodents, Insects), Polytene chromosome polymorphism in Dipteran examples. Role of heterochromatin in species evolution & Karyotypic differentiation. Chromosome instability and fragile sites.

UNIT II : Human Clinical Cytogenetics and Prenatal Diagnosis :

Human blood group genetics – inheritance pattern ; Dermatoglyphics. Heritable chromosomal abnormalities-Disorders of autosomes, Disorders of sex chromosomes, chromosome breakage syndromes. Amniocentesis, Chorionic villi biopsy, Cytogenetics of prenatal chromosomal abnormalities with clinical citations, Transplantation changes in bone marrow, Peripheral stem cells & Umbilical cord cells with chromosomal features.

UNIT III : Cytogenetic techniques:

Cell lines, Cell & Tissue culture practices, Harvesting of cells for chromosomal analysis, conventional & specialized staining protocols, Meiotic chromosome analysis, mitotic chromosome analysis. Chromosomal banding techniques : G-, C-, R-, Q- and NOR staining, CO-FISH staining of chromosomes. Chromosome painting. Construction of phylogenetic tree- Distance method, Parsimony, maximum – likelihood method.

UNIT IV : Molecular genetic techniques

Methods of DNA analysis, Diagnosing infectious diseases, Identifying genetic disease . PCR-DNA sequence analysis; Mitochondrial DNA Studies on population Genetics. FISH and spectral karyotyping ,imaging in cytogenetic practices. Medical forensics:DNA fingerprinting, - genetic identification, Use of technology in anthropological studies . Molecular phylogenetics

UNIT V : Molecular diagnostics and therapy

Genomics and Proteomics: Genome mapping- Genetic mapping, Physical mapping, Resolution of mapping : Comparative Genomics ; microarray analysis and their applications. Importance of proteomics . Database and search engines in proteomics ; Understanding mechanism of pathogenesis, Drug discovery, Disease diagnosis, identification and characterization of novel proteins. Gene therapy: vectors in gene therapy, advances in gene therapy, safety assurances.

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III- Recent Developments

Entomology

12 hours per unit

Total 60 hrs

Unit I Economic entomology

Biosystematics, morphology of insects-

Pests of major field and horticultural crops.

Storage pests, human disease carriers

Beneficial insects *viz.*, honeybees, silkworms, lac insect and pollinator

Vectors of plant diseases

Unit II Toxicology

Insecticides- Classification- Mode of entry and action- toxicity- handling

Chemistry-Chlorinated hydrocarbons, organophosphates, carbamates, synthetic pyrethroids, neonicotinoids, insect growth regulators, botanicals, biorationals

Insecticides with novel mode of action

Resistance, resurgence, secondary pest outbreak, residue and insecticide resistance management, insecticide metabolism and decontamination

Unit II Host Plant resistance

Insect ecology- Insect abundance and diversity

Insect outbreak and climate change,

Insect plant interactions- allelochemicals-

Host selection process, Mechanisms of resistance, types of resistance,

Resistance breeding and biotypes

Unit IV Pest management

Threshold levels, biotic balance and principles of pest management

Cultural, mechanical, physical, chemical, host plant resistance, semiochemicals,

entomophaga and entomopathogens, Sterilization and genetic control, Legal and quarantine measures, Surveillance and sampling

Unit V Insect biochemistry and molecular biology

Physiology of digestion, respiration, growth, development and reproduction

Neurobiology, Electrophysiology and volatiles

Haemocytes, neuroendocrine and neuropeptides in insects

Bacillus thuringiensis, Protease inhibitors, recombinant DNA technology, transgenics

PAPER III : RECENT DEVELOPMENTS

Fish Breeding and Hatchery Management

12 hours/ Unit

Total : 60 hrs.

Unit I – Fish seed resources, natural breeding, riverine fish spawn collection, maturity, breeding season and development of gonads.

Freshwater and marine fish seed resources, Natural breeding of finfishes, Selection of riverine fish spawn collection sites, gear used and methods of collection, fish spawn quantity and quality indices, Sexual maturity , development of gonads, spermatogenesis, oogenesis.

Unit II – Breeding of carps

Breeding of carps in bundhs, induced breeding of warm water finifishes and environmental factors affecting spawning, Fish pituitary gland and synthetic hormones for incuded breeding of fishes, Fish brood stock management and transportation of broodfish, Induced breeding of Indian major carps and exotic carps (silver carp and grass carp), Major carp egg and embryonic developmental stages, Causes of mortality of fish eggs and spawn and their treatment.

Unit III – Fish hatcheries and fish seed rearing techniques

Importance of fish hatcheries, Traditional double – walled hapa, Chinese type of carp hatchety, Glass jar hatchery, Other hatchery devices, Hatchery water quality parameters, Importance of fish nursery, Spawn rearing techniques – nursery pond, Spawn rearing techniques – rearing pond, Packing and transportation of fish seed, Use of anaesthetics and disinfectants in fish seed and brood – stock transportation.

Unit IV – Breeding of other commercially important fishes

Breeding of common carp, Breeding of mahseers, Breeding of trouts, Breeding of tilapia, Breeding of catfishes, Breeding of grey – mullets, Breeding of milkfish, Breeding of Asian seabass, Breeding of groupers, Breeding of indigenous fishes.

Unit IV – Fish Genetics and breeding

Inbreeding in Indian major carps, consequences of inbreeding, inbreeding depression, genetic drift, Selective breeding – history, methods, mating design, planning of Selective breeding programmes, Cross breeding – types, uses, planning, Cryopreservation of fish gametes.

APPLIED ZOOLOGY
PH.D. COURSE WORK

PAPER III : RECENT DEVELOPMENTS

Applied Fisheries Biology

12 Hrs/Unit

Total : 60 hrs

Unit I – Biodiversity assessment

Biodiversity principles, categorization of species into endangered, threatened, extinct etc. methods, scales and indices of biodiversity assessment. Biodiversity of Gangetic river system, Cauvery river system, Himalayan lakes and rivers, west coast of India. Threat to biodiversity: over exploitation, case studies of marine and estuarine fisheries of India. Legal regimes and biodiversity. Introduction of exotic species and their implication.

Unit II – Food and feeding habits

Food and feeding habits of commercially important finifishes and shellfishes. Food of fishes and its relationship to the morphological and anatomical features of digestive system. Quantitative and Qualitative estimation of gut contents. Feeding intensity in relation to season and maturity cycle. Indices used in estimation of food. Factors affecting digestion rates; digestive enzyme activity and bioenergetics of fish.

Unit III - Conservation and Management of exploited fisheries Resources

Factors responsible for fishery productivity, marine parks, marine protected areas, biosphere reserves, closed seasons, mangrove afforestation, cryopreservation of exploited and endangered species. Implementation of square cod end mesh to reduce by catch. Management of major reservoirs, optimal stocking and enhancement. FAO's code of conduct for responsible fisheries. Issues and challenges of multigear fisheries.

Unit IV - Fisheries Environmental Assessment

Critically important climatic factors (temperature, rainfall and wind pattern/ monsoon) influencing aquatic productivity and production. Remotely sensed SS, chlorophyll and wind pattern features of Indian seas. Potential Fishing Zones (PFZs). Influence of rainfall intensity, its seasonal and annual variations on fish migration, breeding, recruitment and production. Optimum water quality parameters prescribed for various water bodies (marine and inland) for different uses groups. Structure and trophic profile of marine, estuarine, reservoir and riverine ecosystem in relation to nutrient profile, plankton profile and oxygen profile.

Unit V – Applications of fisheries models in stock assessment

Development of analytical models, Logistic models of Schaefer and Fox, application of Beverton and Holt's model. Predator – prey models, stock recruitment models, Bio-economic models. Use of latest computer programmes to assess fish stocks such as FiSAT, yield isopleth's diagrams etc.

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III : RECENT DEVELOPMENTS

Agricultural Entomology

12 hrs / Unit

Total : 60 hrs.

Unit I - Insects of agricultural importance:

- Insect pests of annual crops, perennial crops;
- Insect pests of stored products;
- Insect vectors in relation to plant diseases.

Unit II -Productive Insects

- Honey bees, silkworm – mulberry, eri, muga and tassar,
- Lac insects and other productive insects,

Unit III - Methods and principles of pest control

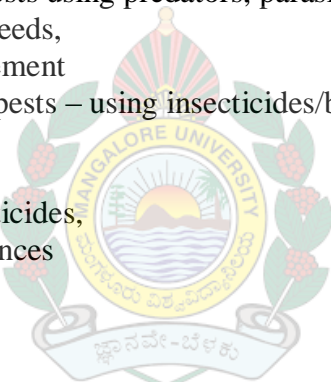

- Biological control of pests using predators, parasitoids and pathogens
- Biological control of weeds,
- Integrated Pest Management
- Management of insect pests – using insecticides/biopesticides etc.

Unit IV - Insecticides

- Classification of insecticides,
- Plant protection appliances
- Safety precautions.

Unit V – Insect pests of cashew

- Tea mosquito bug and its management
- Cashew Stem and root borers and its management
- Minor pests of cashew and their management

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III: RECENT DEVELOPMENTS
Aquatic Animal Health

12 hours/Unit

Total: 60 hours

Unit I- FISH AND SHELLFISH VIROLOGY

Molecular virology and pathogenesis of selected viruses infecting fish and shellfish
Recent research advances in antiviral drugs, viral vaccines
Emerging viruses and evolution of new viruses.

Unit II- ADVANCES IN PARASITOLOGY

Environmental parasitology
Host-parasite interaction: Pathological changes induced in host due to parasitic infection
Molecular parasitology
Evolution of parasites; Hyperparasitism
Antiparasitic drugs applied in aquaculture and their action
Parasitic immunity; Immune evasion strategies of parasites

Unit III- ADVANCES IN IMMUNOLOGY

Cellular Interactions in the Immune System
Regulation of the Classical Pathway of Complement; Regulation of the Alternative Pathway of Complement
Molecular immunology; pathogen recognition receptors
Crustacean immunology

Unit IV- BIOTECHNOLOGICAL TOOLS IN DISEASE DIAGNOSIS

Advances in disease diagnostic procedures in aquaculture
Antibody-based diagnostics
Molecular diagnostic methods such as *in situ* hybridization nucleic acid probe-based diagnosis
Various types of polymerase chain reaction (PCR) such as conventional one step, nested and semi-nested PCR, RT-PCR, real-time PCR; LAMP etc.

Unit V- CRUSTACEAN PATHOLOGY

Normal histology of different organs of crustaceans with special reference to penaeid shrimp
Major pathogens of commercially important cultured crustaceans with special reference to shrimp and freshwater prawn pathogens: viral, bacterial, fungal and parasites

Institute: Central Institute of Fishery Education, Muba

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III: RECENT DEVELOPMENTS

Genetics and Breeding

12 hrs/unit

Total - 60 hours

Unit I:

Physical basis of heredity; probability concepts; Mendelian principles: scope and limitation; Interactions and Epistasis; Chromosome theory of inheritance: genetic basis of sex determination.

Unit II:

Cell structure; Organization and function of sub-cellular organelles; Cell division: Cell division: Cell cycle and its regulation; Cytogenetics: Cytogenetics and evolution; Karyotyping; Linkage and crossing over; Mutation; Nucleic Acids: Genetic material - Structures of DNA and RNA.

Unit III:

Modern concept of gene; DNA as genetic material; Extrachromosomal DNA: Mitochondria, chloroplast, plasmids (circular and linear), organization and replication; DNA Repair: Types and mechanisms; Recombinant DNA technology.

Unit IV:

Historical development of fish breeding and domestication; Current status of aquaculture and Fisheries in world and India; Application of genetics for conservation; Conservation and preservation of aquatic species: Issues and strategies; Gamete quality analysis and preservation.

Unit V:

Application of genetic principles to population; Evolution and Genetic conservation strategies; Genetic evaluation and genetic improvement programs; DNA bar-coding and molecular identification of species; Introduction to various national and international programs on bar codes.

Institute: Central Institute of Fishery Education, Mumbai

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III: RECENT DEVELOPMENTS

Biochemistry and Nutrition

12 hrs/unit

Total - 60 hours

Unit I- Carbohydrates and lipids

Metabolism of carbohydrates; Glycolysis, Glycogen metabolism and TCA cycle, pentose phosphate pathway.

Utilization, transport and storage of lipids

Cholesterol, lipoproteins and cardiovascular diseases.

Role of EPA, DHA in health and diseases.

Unit II- Proteins

Transport proteins, hormonal proteins and their functions

Protein evolution, haemoglobin and myoglobin, haemoglobin variants, oxygen transport.

Protein folding, molecular chaperons, stress proteins and adaptation mechanisms.

Enzymes: Kinetics, inhibition and regulation of enzyme catalyzed reactions.

Immunoglobins: structure of antibodies, generation of diversity and immune responses.

Unit III - Introduction to nutrition

Classification of feeds.

Common methods of analysis of nutrients and feed stuffs.

Morphology and fine structure of vertebrate digestive system.

Physiology of digestion, absorption and their regulation.

Unit IV – Nutrition and diseases

Functional significance of nutrition

Nutritional deficiency disorders

Nutrition and degenerative diseases

Food toxicants; dietary antioxidants.

Unit V – Applied Nutrition and Biochemistry

Nutraceuticals for growth and immunity

Nutrigenomics and their applications

Nutrient delivery through nano particles

Electron radiation for enhancement of shelf life and nutritional quality of feed ingredients

Feed formulation and quality evaluations.

APPLIED ZOOLOGY
PH.D. COURSE WORK

Paper III: RECENT DEVELOPMENTS

Biodiversity and Conservation

12 hrs/unit

Total - 60 hours

Unit I – Introduction

Definition and types of biodiversity, recent trend in aquatic biodiversity with reference to different phyla, factors affecting biodiversity, climate change and biodiversity, methods for assessment and conservation of aquatic biodiversity.

Unit II- Taxonomy

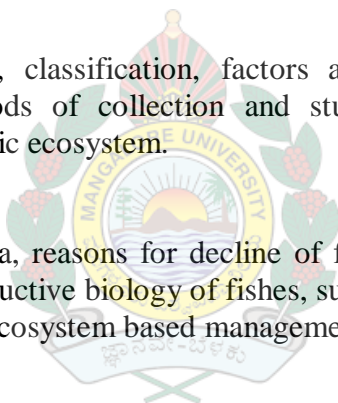

Introduction, importance and principles of taxonomy, preparation of identification key for important groups of aquatic organisms: vertebrates – fishes, invertebrates – crustaceans, mollusks etc. traditional and truss morphometry, recent advances in taxonomy molecular taxonomy.

Unit III- Plankton

Significance of plankton study, classification, factors affecting production, occurrence, distribution and density, methods of collection and study, estimation of primary and secondary production of an aquatic ecosystem.

Unit IV- Fishery biology

Status of fish production in India, reasons for decline of fish catch, overexploitation Stock enhancement, feeding and reproductive biology of fishes, sustainable management of aquatic resources, co-management, and ecosystem based management.

APPLIED ZOOLOGY
Ph.D. Course Work

Paper III : Recent Developments
Radiation Biology

12 hours/unit

Total: 60 hours

Unit 1: Basic Radiation Physics

Atomic and nuclear structure – Rutherford's and Bohr's atomic models, nucleus and its constituents, isotopes, isobars and isomers. Electromagnetic radiation – Ionising and non-ionising radiations. Radioactivity – Radioactive decay, decay constant, half-life, biological half-life, types of ionising radiations (alpha, beta, X-ray and gamma radiations) and radioisotopes. Radiation sources – Natural and artificial radioactive sources.

Unit 2: Radiation Measurements, Quantities, Units and Protection

Basic principles of radiation detection - GM detectors, scintillation detectors, semiconductor detectors, solid state nuclear track detectors (SSNTD) and thermo luminescent dosimeters (TLD). Radiation quantities and units – Activity, radiation exposure, absorbed dose, equivalent dose and effective dose. Linear energy transfer (LET). Radiation protection - Objectives of radiation protection, committees and regulatory bodies concerned with risk estimates and radiation protection, occupational and non-occupational exposure.

Unit 3: Interaction of Radiation with Cells

Action of radiation on living cells - Radiolytic products of water and their interaction with biomolecule - Nucleic acids, proteins, enzymes, fats - Influence of oxygen, temperature - Cellular effects of radiation - Mitotic delay, chromosome aberrations, mutations and recombinations - Giant cell formation, cell death Recovery from radiation damage - Potentially lethal damage and sublethal damage recovery.

Unit 4: Biological Effects of Radiation

Somatic effects of radiation - Physical factors influencing somatic effects - Dependence on dose, dose rate, type and energy of radiation, temperature, anoxia, - Acute radiation sickness - LD 50 dose - Effect of radiation on skin and blood forming organs, digestive tract - Sterility and cataract formation - Effects of chronic exposure to radiation - Induction of leukaemia - Radiation Carcinogenesis - Risk of carcinogenesis - Animal and human data - Shortening of life span - In-utero exposure - Genetic effects of radiation - Factors affecting frequency of radiation induced mutations - Dose-effect relationship - first generation effects.

Unit 5: Biological Applications of Radiation and Radioisotopes

Diagnostic techniques, radiotracers techniques for diagnosis and treatment, cancer therapy, autoradiography techniques, gamma knife radiosurgery, *Helicobacter pylori* infection diagnosis by Carbon-14 urea breath test, radioimmunoassay (RIA) and immunoradiometric assay (IRMA).

APPLIED ZOOLOGY
Ph.D. Course Work

Paper III : Recent Developments
Fishery Biology and Aquaculture Management

12 hours/unit

Total: 60 hours

Unit-I - Biodiversity assessment and conservation of the fish resource:

Biodiversity principles, Indices of biodiversity assessment of fish species. Diversity of fresh water, marine and estuarine fishes of India. Threats to biodiversity- overexploitation, exotics, pollution and case studies of fresh, marine and estuarine fisheries of India. Factors influencing fishery productivity. Marine parks, marine and freshwater protected areas. Fishing closed seasons, mangrove afforestation, cryopreservation of exploited and endangered species. Plankton diversity, Sustainable management of aquatic ecosystem, Implementation of square cod end mesh to reduce by catch. Management of major reservoirs, optimal stocking and enhancement. FAO's code of conduct of responsible fisheries. Issues and challenges of multigear fisheries. DNA bar coding and their utilization in conservation of fish biodiversity and biotechnology applications in fish and shellfish conservation

Unit-II- Biology of fishes and fisheries environmental assessment:

Length-weight relationship, Growth, age determination, food and feeding habits of commercially important fin fish and shellfishes. Qualitative and quantitative estimation of gut contents. Fish spawning, reproductive cycles, Principles of fish genetics and breeding, methods of breeding, sex determination. Critically important climatic influences on aquatic productivity. Potential Fishing Zones (PFZs). Optimum water quality parameters prescribed for various bodies (marine and inland) for different uses groups. Structure and trophic profile of marine, estuarine, reservoir and riverine ecosystem in relation to nutrient profile, plankton profile and oxygen profile. Application of various fisheries models in stock assessment- Beaverton Holt's Model, Logistic model of Schaefer and Fox, predator-prey models, Stock recruitment models, Bioeconomic models. FiSAT, yield isopleth's diagram etc

UNIT-III- Aquaculture management:

Fish culture- freshwater and lacustrine culture practices in India. Ornamental fish culture, Brackish water aquaculture, Mariculture- finfish and shellfish culture. Seed production of cultivable fishes, crustacean and molluscs. Advances in aquaculture production systems, seed production and hatchery management. Aquaculture feed technology- Larval nutrition and culture of fish food organisms, Aquaculture engineering, Fish and shellfish physiology and endocrinology, Aquaculture and environment. Importance of fish hatcheries and fish rearing techniques. Fish nutritional requirements of cultivable finfish and shellfish: larvae, juveniles and nutritional bioenergetics- adults; role of natural food in fish nutrition. Feed performance and economics. Transgenic fish, detection of transgenic, applications, regulatory aspects of transgenesis.

UNIT-IV- Aquatic animal health management:

Basics of fish and shellfish health management: Host-pathogen-environment relationship. Diseases in aquaculture- parasitic, bacterial, viral and fungal pathogens of fish and shellfish. Water, soil, environmental parameters and their effects on fish health. Disease in hatcheries and grow out systems. Epidemiology of Diseases, nutritional pathology, Techniques in health management: Microbiological, hematological, histopathological, immunological and molecular techniques. Disease surveillance and reporting. Defence system in fish and shellfish: Innate and acquired immunity, inflammation response to diseases. Methods for disease control and management- Environment management, chemotherapeutic agents, host management, prophylaxis- vaccines, adjuvants, immunostimulants and probiotics.. Fish health and quarantine systems. Seed certification, SPF and SPR. Biotechnology in health management: molecular nucleic acid and antibody based diagnostics, vaccines.

UNIT-V- Fisheries economics and marketing:

Nature and scope of natural resource economics, bioeconomic analysis of fisheries. Fisheries resource management policies- taxes, subsidies, permits and direct controls. Nature and scope of aquaculture economics. Theories of Factors of Production. Factor - Product Relationship, Factor - Factor Relationship, Product- Product Relationship Costs and Income Concepts in Fisheries, Resource Use Efficiency Analysis, Risks and Uncertainties in Fisheries Price Analysis , The Price Index Number, Market and Marketing Structure, Government and Co-operative in Marketing , Market Equilibrium and Market Structures Cobb-Douglas quadratic production functions, Economics of intensive and semi intensive aquaculture; Role of marketing in fisheries and aquaculture. The Fish Processing Industry and the Fish Trades. Strategies and Methods for Promoting Fisheries Development.
