

MANGALORE UNIVERSITY
DEPARTMENT OF BIOSCIENCES
MSc BIOTECHNOLOGY

BTS 505 MEDICAL BIOTECHNOLOGY

Hours: 40

Course outcome

This Course will enable students to:

- Get an overview of the immune system with particular reference to diagnostics, therapy and transplantation.
- Understand the genetics behind genetic diseases and syndromes and techniques associated with diagnosis and gene therapy
- Learn about cancer biology with particular reference to carcinogenic agents, basis of cancer, treatment strategies and approaches, stem cells and applications

UNIT I (13 hrs)

Immunology: Overview: concept of self and nonself, antigens, antibodies; immune response, evolution of immune response, immunological tolerance, hypersensitivity, humoral and cell-mediated immunity, active and passive immunization, antigen processing and MHC. Immunobiology: blood groups and transplantation antigens, HLA. Immune deficiencies and disorders – AIDS. Allergy. Diagnostic tools: Antigen-antibody reaction, agglutination, immunoelectrophoresis, immunofluorescence, enzyme-linked immunosorbant assay (ELISA), radioimmunoassay (RIA). Immunization and vaccines – new types of vaccines, edible vaccines. Organ transplantation.

UNIT II (13 hrs)

Genetics: Structure, organization and types of eukaryotic chromosomes, Heterochromatin, euchromatin, telomeres, types of chromosomes. Cell division. Molecular and cellular biology of fertilization *in-vitro* fertilization, assisted reproductive techniques, cloning. Karyotyping - heritable diseases and syndromes. Prenatal diagnosis (amniocentesis and chorionic villus sampling), Diagnosis of genetic diseases, Gene therapy, PCR.

UNIT III (14hrs)

Cancer biology: Cell cycle and its regulation. Apoptosis. Carcinogenic agents and molecular biology of cancer, Abnormal cell growth: mechanism of transformation of cells. Genetic basis of Cancer, Physical and chemical carcinogenic agents; Viral and cellular oncogenes, tumor suppressor genes, Telomerases and their role in cancer. Recent advances in therapeutic approaches to disease treatment: Stem cells - types and applications. Cancer therapy – immunotoxins and gene therapy.
