Reg. No. $\square$

First Semester M.B.A. (I.B.) Degree Examination, December 2018 INTERNATIONAL BUSINESS

Quantitative Techniques
Time : 3 Hours
Max. Marks : 70

## SECTION - A

Note : Answer any two questions. Each question carries 10 marks. Answer to the question should not exceed five pages.

1. What are the main components of time series? How will you determine them?
2. Describe the two methods of collecting data. In what special circumstances are two methods suitable?
3. Critically examine the different methods of measuring dispersion.
SECTION - B

Note : Answer any three questions. Each question carries 12 marks. Answer to the question should not exceed six pages.
4. Mr. A bought 3 books, 2 pens and 2 pencils for which the bill was Rs. 282. The next day he bought 5 books, 3 pens and 1 pencil for which the bill was Rs. 466. He again purchased 4 books, 8 pens and the bill was Rs. 400. If the price remained unchanged, find the price of 1 book, 1 pen and 1 pencil using Cramer's rule.
5. From the data given below, find the missing frequency. If the arithmetic mean is 28 , find the median :

| Profits per shop (Rs. ‘000) | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of shops | 12 | 18 | 27 | $?$ | 17 | 6 |

6. From the following data obtain the two regression equations and calculate the correlation coefficient :

| $\mathbf{X}$ | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{Y}$ | 9 | 8 | 10 | 12 | 11 | 13 | 14 | 16 | 15 |

Estimate the value of Y which should correspond on an average to $\mathrm{X}=6.2$.
P.T.O.

## MIBS 405

7. From the data given below, find the coefficient of correlation between the driver's age and the number of accidents made by him.

| Number of <br> accidents | Driver's age |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $25-30$ | $30-35$ | $35-40$ | $40-45$ | $45-50$ |
| 0 | - | 6 | 6 | 14 | 8 |
| 1 | - | - | 18 | 8 | 2 |
| 2 | 6 | 10 | 20 | 6 | - |
| 3 | 8 | 18 | 12 | - | - |
| 4 | 24 | 14 | 6 | 2 | - |

8. Given the revenue function $R(x)=-3 x^{3}+600 x^{2}$ and the cost function $C(x)=357 x^{2}+1800 x$; find:
a) The marginal profit at $x=10$ units. Interpret the result.
b) The marginal profit at $x=100$ units. Interpret the result.

## SECTION - C

(Compulsory)
Note : Answer to the question should not exceed six pages.
9. The following figures relate to the prices and quantities of certain commodities. Determine current price index through :
(a) Laspeyre's method (b) Paasche's method (c) Bowley's method and (d) Fishers method:

| Commodities | $\mathbf{2 0 1 6}$ |  | $\mathbf{2 0 1 7}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{P}_{0}$ | $\mathrm{Q}_{0}$ | $\mathrm{P}_{1}$ | $\mathrm{Q}_{1}$ |
| A | 2 | 8 | 4 | 6 |
| B | 5 | 10 | 6 | 5 |
| C | 4 | 14 | 5 | 10 |
| D | 2 | 19 | 2 | 13 |
