MTS 561	Cryptography	4 Credits (48 hours)

Course Outcome: To introduce the concepts and to develop working knowledge on fundamentals of Cryptography. Students will have the knowledge and skills to apply the concepts of the course in Computer Applications including Cyber security.

Course Specific Outcome: At the end of the course students will have the knowledge and skills to understand, explain in depth and apply the fundamental concepts-

- Number Theoretic Background
- Finite Fields and Quadratic Residues
- Cryptography, Public key
- Primality and Factoring

Unit I - Some Topics in Elementary Number Theory:
Time estimates for doing arithmetic, Divisibility and Euclidean Algorithm, Congruences, Some Applications to Factoring.

(8 Hours)

Unit II - Finite Fields and Quadratic Residues:
Finite Fields, Quadratic residues and Reciprocity.

(6 Hours)

Unit III - Cryptography:
Some Simple cryptosystems, Enciphering matrices.

(6 Hours)

Unit IV - Public Key:
The Idea of Public Key Cryptography, RSA, Discrete Log, Knapsack, Zero-knowledge Protocols and Oblivious Transfer.

(14 Hours)

Unit-V - Primality and Factoring:
Pseudoprimes, The rho method, Fermat Factorization and Factor Bases, The Continued Fraction Method, The Quadratic Sieve Method.

(14 Hours)

MTS 562	Finite Element Method with Applications	4 Credits (48 hours)

Course Outcome: This course intended to understand and develop proficiency in the application of the finite element method to realistic problems in modeling, analysis, and interpretation.

Course Specific Outcome: At the end of the course students will have the knowledge and skills to understand, explain in depth and apply the fundamental concepts-

- Weighted Residual Approximations
- Finite Elements and Finite Element Procedures
- Finite Element solution of differential equations

Unit I - Weighted Residual Approximations:
Point collocation, Galerkin and Least Squares method. Use of trial functions to the solution of differential equations.

(12 Hours)

Unit II - Finite Elements:
One dimensional and two dimensional basis functions, Lagrange and serendipity family elements for quadrilaterals and triangular shapes. Isoparametric coordinate transformation. Area coordinates standard 2- squares and unit triangles in natural coordinates.

(12 Hours)

Unit III - Finite Element Procedures:
Finite Element Formulations for the solutions of ordinary and partial differential equations: Calculation of element matrices, assembly and solution of linear equations.

(12 Hours)

Unit IV
Finite Element solution of one dimensional ordinary differential equations, Laplace and Poisson equations over rectangular and nonrectangular and curved domains. Applications to some problems in linear elasticity: Torsion of shafts of a square, elliptic and triangular cross sections.

(12 Hours)

Semester wise distribution of credits for M.Sc. Mathematics Programme

SEM	Theory(HC[a])		Theory (SC[b])		Open Elective		Lab Credits (SC[b])	Project Credits (HC[a])	Total Credits
	No. of Courses	Credits	No. of Courses	Credits	No. of Courses	Credits			
I	3	4	2	4	-	-	2	-	22
II	3	4	2	4	1	3	2	-	22+3*
III	3	4	2	4	1	3	2	-	22+3*
IV	2	4	2	4	-	-	-	4	20
Total		44		32	-	6	6	4	86+6*

HC[a] - Hard core, SC[b] - Soft core, *Not included for CGPA

Total Hard Core Credits is 44+4=48 (55:81%) and total Soft Core Credits is 32+6=38 (44:19%).
