

## BSP408 BASIC MICROBIOLOGY LAB.

### Course Outcomes:

*After undergoing the course, students will be able to :*

- CO 1. Understand basic techniques and instrumentation in microbiology.
- CO 2. Apply the techniques of sterilization of media and glassware.
- CO 3. Isolate, identify and culture microorganisms
- CO 4. Perform microbial motility tests.
- CO 5. Execute the filter sterilization and microbial isolation.

1. Introduction to basic techniques and instrumentation in microbiology
2. Microscopic observations of microorganisms and micrometry
3. Staining techniques: Properties of stains, microbial smear preparation, simple and differential staining for morphological studies, Gram's staining, endospore staining, intracellular lipids, acid-fast staining, flagella, viability tests and relief (negative) staining;
4. Microbial motility tests.
5. Microbial culture media, microbial growth
6. sterilization of media and glassware, filter sterilization
7. stock culture, subculture, maintenance of culture.
8. Techniques of microbial isolation.

## BSP409 GENETICS LAB

### Course Outcomes:

*After undergoing the course, students will be able to:*

- Understand the importance of *D. melanogaster* as an excellent model in Genetics.
  - Maintain and conduct experiments using *D. melanogaster*.
  - Conduct crossing experiments to learn Mendelian and non-Mendelian Genetics
  - Solve genetic problems such as legal issues like paternity and maternity disputes.
1. Salient features and method of maintenance of *Drosophila melanogaster* culture.
  2. Techniques for handling and examining the flies.
  3. Preparation of salivary gland chromosomes of *D. melanogaster* and identification of different arms.
  4. Preparation of salivary gland chromosomes in *D. nasuta*
  5. Identification of blood types in human.
  6. Experiments to demonstrate patterns of inheritance of a few characters (Crossing).
  7. Study of (i) mating behaviour in *Drosophila* (ii) somatic mitosis in *Drosophila*.
  8. Biochemical separation of eye pigments in *Drosophila*
  9. Genetic problems.

## BSP410 BIOCHEMICAL TECHNIQUES LAB

### Course Outcomes:

*After successful completion of the course, students will be able to:*

- CO 1. Separate the mixtures by planar and column chromatographic techniques.
- CO 2. Undertake quality analyses required in food industry by identifying additives, vitamins, preservatives, proteins, sugars and amino acids.
- CO 3. Use UV-Vis spectrophotometry for estimation.
- CO 4. Operate flame photometry.
- CO 5. Perform electrophoretic techniques for separation and determination of molecular weight.
- CO 6. Perform immune-diffusion techniques and ELISA for detecting presence and

quantity of antigens.

CO 7. Use centrifugation for separation of molecules.

1. Ascending, descending and circular paper chromatography for separation of amino acids/carbohydrates
2. TLC of amino acids (1D and 2D)/carbohydrates
3. UV-Visible Spectrophotometry-verification of Beer Lambert's law
4. Flame photometry and its application in the estimation of serum, calcium, potassium and lithium and sodium.
5. HPLC (Demonstration)
6. Gel electrophoresis- native and SDS-PAGE and estimation of molecular weight of Proteins
7. ELISA for quantification of an antigen.
8. Immunodiffusion
9. Centrifuge use and application of centrifugation techniques for separation
10. Separation by filtration technology
